Dear Mr. Matheis:

On May 1, 2006, WRS conducted air monitoring for volatile organic compounds within the vent for the soil vapor extraction system at the Sweet Kleen Laundry Site. The air monitoring was conducted utilizing a GasAlertMicro 5 multiple gas detector equipped with a photo ionization detector (PID). During the course of the day, several readings were taken from the above-grade vent, with concentrations ranging from 12-15 ppm.

Should you require additional information regarding this air monitoring, please do not hesitate to contact me.

Sincerely,

Steve Cannon
Staff Scientist
